lang.support.it

Language support for Italian

Description

This function adds support for Italian to the koRpus package. You should not need to call it manually, as that is done automatically when this package is being loaded.

Usage

```
lang.support.it(...)
```

Arguments

... Optional arguments for [set.lang.support](#).

Details

In particular, this function adds the following:

- `lang`: The additional language "it" to be used with `koRpus`
- `treetag`: The additional preset "it", implemented according to the respective `TreeTagger[1]` script
- POS tags: An additional set of tags, implemented using the documentation for the corresponding `TreeTagger` parameter sets[2, 3]

Hyphenation patterns are provided by means of the [syllly.it](#) package.
