---

lang.support.pt

*Language support for Portuguese*

---

## Description

This function adds support for Portuguese to the koRpus package. You should not need to call it manually, as that is done automatically when this package is being loaded.

**Usage**

```
lang.support.pt(...)
```

**Arguments**

... Optional arguments for [set.lang.support](#).

**Details**

In particular, this function adds the following:

- `lang`: The additional language "pt" to be used with `koRpus`
- `treetag`: The additional preset "pt", implemented according to the respective `TreeTagger`[1] script
- POS tags: An additional set of tags, implemented using the documentation for the corresponding `TreeTagger` parameter set[2]

Hyphenation patterns are provided by means of the [syllly.pt](#) package.

[2] <http://www.cis.uni-muenchen.de/~schmid/tools/TreeTagger/data/Portuguese-Tagset.html>

**Examples**

```
lang.support.pt()
```
